

Computer Organization and Assembly Language

FALL 2020

Project

Super Mario is a Nintendo Entertainment System video game released in 1985 by Nintendo. The game has become one of the most important and successful video game in that time. It is the one of the favorite game of children of that era. In Super Mario, the character Mario sets off on an adventure to save the beautiful Kingdom. The game was divided in different levels, where each level is harder than the previous level. Mario has to pass through several hurdles, and also encounter different enemies at each level. After certain level, Mario has to save kingdom from the monster who has the kingdom. Monster throw different objects to stop the Mario from reaching the kingdom.

In this project, you have to develop a *mini* version of the Super Mario on the console using Assembly language. You have to develop **four** different levels of the game. Description of each level is given below.

Other than these three levels you have to also create game start and end screens. Start screen will show up the name of the game, followed by the screen that asks for username. At the end, the screen should show the score, level and *Win* or *Lose*.

Level 1 (Deadline: 23rd Nov):

At Level 1, you have to create the character of Mario, hurdles and Flag (on the top right of the screen). Mario will start running from the left side of the screen (using left-right arrow keys) towards the flag and jump over the hurdles (using up arrow key). When Mario reaches the flag, level will be completed and you have to start the next. Below is example screenshot.

This screen is made just to elaborate the level 1.. Things that you have to do mentioned below.

You are required to implement following things:

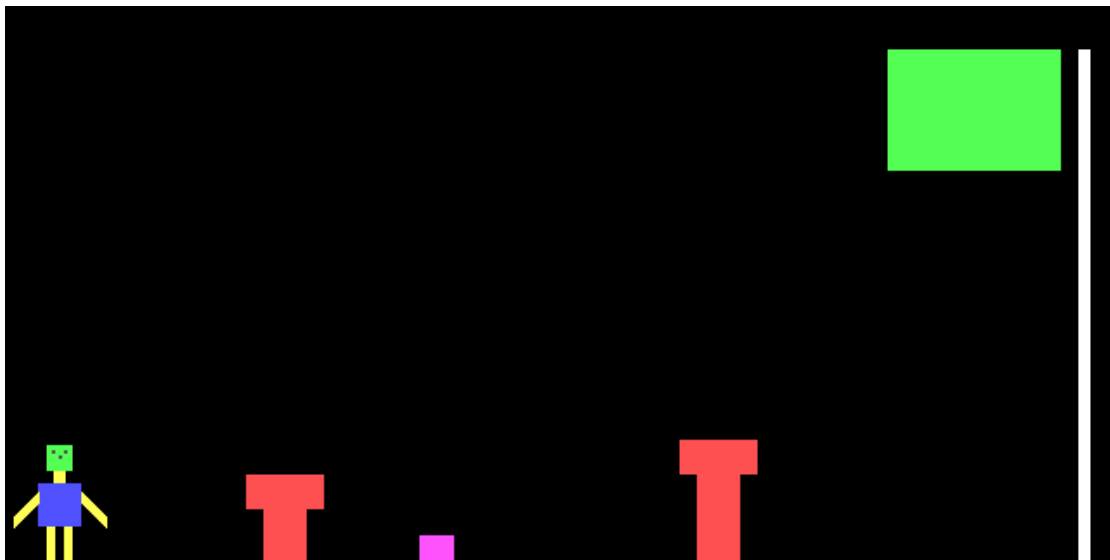

- Mario Character
 - Proper body of Mario similar to the one in screenshot.
 - Use special characters to design appropriate Mario character.
- Hurdles
 - You have to draw at least **three** hurdles of different sizes.
 - You can draw hurdles as you want but not less than three hurdles.
- Flag
 - Flag should be on the right most side.
 - You also have to draw Moon and Star (or other similar characters) in the green part of flag.

Level 2 (Deadline: *todo*):

- At Level 2, all the things you have done in Level 1 should remain the same, and you have to add movement logic i.e.,
 - Movement
 - To move Mario, use the left and right arrow keys.
 - It can jump using up key to pass the hurdle.

Level 3 (Deadline: *todo*):

At Level 3, all the things you have done in Level 2 should remain the same, and you have to add enemies between the hurdles. Enemies move between hurdles.

The pink box represents the enemy.

You are required to implement following concepts:

- Enemy Character
 - You have to draw enemy character which resembles with the following Mario enemy character.

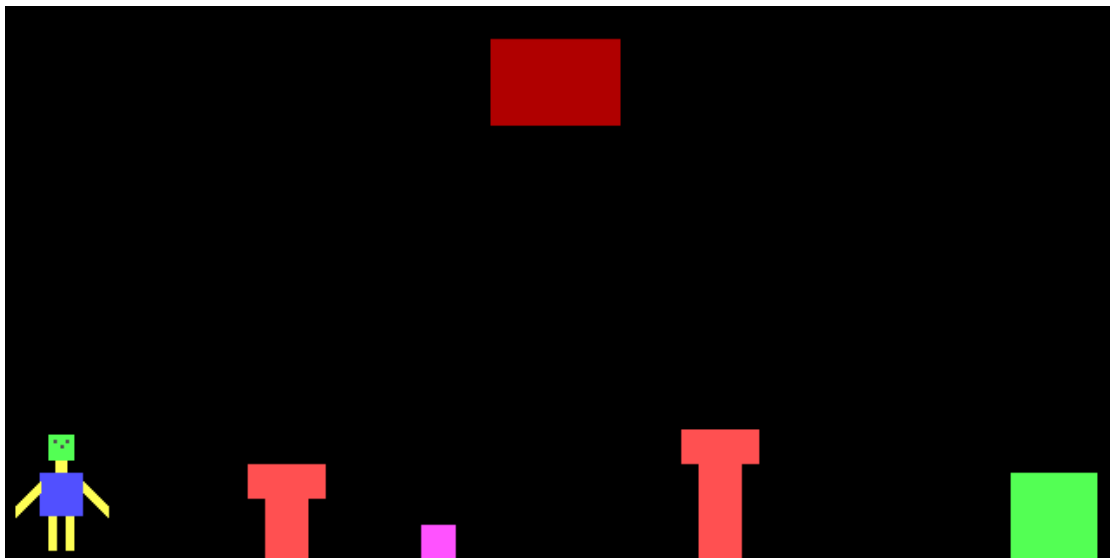

- You can create triangle with the legs and eyes but it should be look like an enemy character.

- Create at least two enemies.
- Enemy Movement
 - Enemies should move between the hurdles left and right.
- Enemy Collision
 - You have to detect the collision of Mario with enemy which will result in death of Mario.
- Some sort of perks too...
 - todo

Level 4 (Deadline: todo)

At Level 4, all the things you have done in Level 3 should remain the same, and have to add monster and replace flag with the kingdom in the scene.

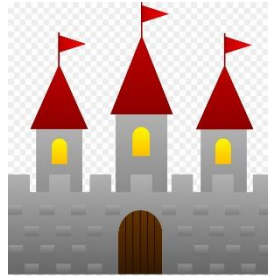

Red box is representing monster and green box is represent kingdom.

You are required to implement following things:

- Monster
 - You have to create monster which fly at the top of the scene.
 - It throw objects to stop Mario from reaching kingdom
 - If monster thrown objects collide with Mario game will over.
 - Monster Character for reference

- Monster move left and right on the top.
- Kingdom
 - You have to create appropriate kingdom.

Instructions:

The project is to be submitted in levels.

- Level 1 is to be submitted with report on *23rd Nov.*
- Level 2 is to be submitted with report on *todo.*
- Level 3 is to be submitted with report on *todo.*
- Level 4 along with Level 1, 2 & 3 (complete game) is to be submitted with final report on *todo.*
- The project consists of 4 phases. Each phase will have a deadline. If you miss a deadline of a particular phase you will not be awarded any credit in that phase.
- Each next phase will be dependent on the previous phase, so you must start working on the project from day-1.
- A group of maximum size **two** is allowed.
- Cross Section groups are **not** allowed.
- User Interface is important in this project. Try to develop an attractive user interface.
- Use of extra features in the project is encouraged.
- Use good programming practices (well commented and indented code; meaningful variable names, readable code etc.).
- *Copy/cheating case will be awarded an “F” grade in the course.*

Good luck ☺
